Hypothesis Investigation Results

Evidence	Hypothesis	Verdict
Similar OTIF gaps across cities	H4 Transportation	Rejected
Product failure spread only 4.53%	H1 Forecast Failure	Weak Support
OT stable across promise windows	H5 Over-Promising	Rejected
No seasonal pattern detected	H7 Festival Demand	Rejected
No concentrated supplier events	H2 Supplier Shortage	Rejected
Historical date changes unavailable	H6 Date Changes	Not Testable
Day buckets nearly identical	H8 Month-End Rush	Rejected
41.13% failures in 5-10% bucket	H3 Warehouse Error	Partial

PRIMARY INVESTIGATION OUTCOME

Warehouse execution issues are the strongest observable failure driver.

Evidence:

- Small recurring shortfalls dominate failures.
- No catastrophic stockouts detected.
- No city-specific transportation bottleneck.
- No meaningful promise window effect.

RECOMMENDED ACTION

Priority Focus:
Improve warehouse fulfillment accuracy.

Actions:

- Strengthen picking and packing controls.
- Improve inventory count accuracy.
- Reduce recurring 5-10% shortfalls.
- Implement dispatch validation checks.

Projected OTIF Performance (90 Days)

Forecast remains structurally flat without operational intervention

H1-H2 Investigation Outcome

Failure rates are nearly identical across all 18 products.
No SKU concentration exists.
No supplier shortage pattern was detected.

H3 Investigation Outcome

41.13% of failures fall within the 5-10% shortfall range.
No catastrophic stockouts were observed.

Conclusion:

Recommended Supply Action

Improve warehouse picking accuracy.

The 30-point gap between LIFR and VOFR indicates small but frequent fulfillment misses.
